

Terry Comms Ltd

TelForms for Windows users

Web Site

This website uses a CSS menu which Internet Explorer versions 7 and below do not support. Please use the menu below.

Otherwise download Firefox or Internet Explorer 8 or other CSS compatible browsers.

TelFormFactory

TelFormFactory requires Java Development Kit 1.6 JDK1.6 or above. This is not the same as the JRE. It is freely available from <http://java.sun.com>. Follow the instructions to install the JDK on your particular platform

The TelFormFactory jar file needs to be run using the java from the JDK bin directory eg assuming you are a Windows user and the JDK is installed in "C:\Program Files\Java\jdk1.6.0_14" then the command will start with "C:\Program Files\Java\jdk1.6.0_14\bin\java."

Be aware that your anti-virus software may also cause problems.

TelFormFactory is developed and mostly tested on Linux machines so no doubt we will find more problems. Please report experiences to the relevant Feedback page on <http://www.telform.info/wordpress> pending improved support.
